The MPS II is a portable screening device enabling the early detection of patients at risk of age-related macular degeneration (AMD) – the leading cause of vision loss in people over 50 worldwide.

Low macular pigment (MP) is a significant and modifiable risk factor for AMD. Once detected, MP can be managed through changes to diet and lifestyle, including the daily intake of nutritional supplements. Such steps – whose effectiveness are monitored by the MPS II – can reduce the risk of developing AMD or progressing to the more debilitating ‘wet’ form of the condition.

This Quick Start Guide gives simplified set-up instructions for the MPS II.

Please refer to the MPS II User Manual for detailed set-up and operating instructions before you begin using the device.

Accessories kit content includes:
- Patient response button
- Power cable
- Spare fuses
- USB cable
- USB flash drive
- Eye patch
- Dust cover
- Trial lens holder

Product name: MPS II
Product model: MPS9000
Medical Device Class 1
CE marked
FDA registered

Specifications are subject to change without notice.
